SD-WAN	Supported	Supported
Manag	pan OS	Forti OS
Licensing	depends on required	Depends on required

13) what happens if the session table reach 80%.

Troubleshoot.

IP Config

- The firewall approaching its session capacity
- New Connection may face resource capacity
- New session establishment can available resources

show session info

show session all

14) Types of obj in palo alto firewall

- Address obj → IP add or ^{Subnet} ~~Subnet~~
- Address group • service obj • service group • App obj • ~~obj~~ App filter
- Tag • security policy group • Zone

Internal server 192.168.10.10

15) Dynamic IP and port in palo

Translate private IP address and source port into Public address.

eg: 192.168.1.10:50000 (Inside)

Source NAT / DIPP

(Public IP) 203.0.113.10:62000

16. Intrazone VS interzone

Traffic between Interfaces or
Sources belonging to same security
Trust > Trust

Interzone → Traffic bet diff security
Trust → untrust zones

17) CMA to IP add to Management
int

Config

Set device config system type static

" " " " ipaddress

192.168.1.130

" " " " netmask 255.255.
0.0

" " " " default gateway

DNS 192.168.1.1

" " " " dns setting server
primary 8.8.8.8

Commit

18) steps to create nat obj in palo alto

1) login palo alto 2) obj 3) add
4) Add 5) obj Name 6) IP Net /
range 7) IP address 8) destination
9) ok. 10) Commit

8: IP Netmask: 192.168.10-10/32

19) Company Internet issue -> Conf

1) physical / Interfaces WAN and
status, error and IP.

2) Routing default route and next

3) security policy 4) NAT, IP, 1

5) # show Int all
